1. How to change the logo

To change the logo:

- open the “Logo Holder” composition
- delete the sample logo layers and add your own logo, preferably with transparent background

2. How to change the words

In the “Project Settings” composition you can change the words and their color.

Edit the words in the “Type Words Here” layer (20th layer). If you hit F3 on that layer, you can change the color of the words, and also the randomness of the color.

If you hit F3 on other layers (“First Line”, “Second Line”, “Line Above X”, “Line Below X”), you can adjust the randomizer, so that words appear in a different order.

3. The “Render Me” composition

The “Render Me” composition is the final composition, the one that you will render or include in your own compositions.

If you would like to render the composition alone:

- go to menu Composition → Make Movie
- select the resolution (Full is HD 1920x1080; Half is 960x540)
- select the Output Module (file type)
- choose a file name
- click “Render”

4. The music

The awesome music used in the preview is created by Alex Hayrabedian. You can get it from here:

<http://audiojungle.net/item/epic-intro/1171916>

5. The font

The font used in this project is “Sansation” (bold version), a free font by Bernd Montag. You can download it here: <http://www.dafont.com/sansation.font>

6. Support and Thank you

If you need any help regarding this project (or any of my projects), or if you want specific customizations, you can always contact me through my videohive.net profile page:

<http://videohive.net/user/povesteam>.

Thank you for buying and using this project. I hope that you are satisfied with it and that others will appreciate your final product.
